

APL+Win v11.1.03 Update
Copyright (c) 2012 APLNow LLC.
All Rights Reserved
Jan. 5, 2012

This update is recommended for all APL+Win subscribers that previously installed the version 11.1 update. This update addresses a bug in version 11.1 that resulted in the incorrect placement of the caret (flashing cursor) in the creation of the Edit and RichEdit APLGUI controls. The caret should normally appear in position (1 1) but appeared in position (20 126) in version 11.1.
