Dec. 27, 2011

This update is recommended for all current APL+Win subscribers
that have version 11.0 installed. Current APL+Win subscribers
can download the update for free at
http://www.apl2000.com/software.php.

Update description:

This update release includes the following important new
enhancements and fix in version 11.0:

New Enhancements:

1. New Virtual APL Keyboard GUI control in the session manager.
Click 'View\APL keyboard' menu or press Ctrl+B to display the
keyboard in APL+Win. The documentation for this enhancement is
available in the 'Manuals' folder in the in APL+Win v11 program
group.

2. New APL Idioms Manager control in the session manager. Click
'View\Idioms Manager' menu or press Ctrl+I to display the Idioms
Manager in APL+Win. The documentation for this enhancement is
available in the 'Manuals' folder in the in APL+Win v11 program
group.

Bug Fixes:

1. The workspace size memory was incorrectly computed in 32-bit
Windows operating system when the 4GT option is not enabled. In
this case there is no high memory available above the 2GB memory
line and the APL+Win system was incorrectly imposing a minimum
startup workspace size of 256 MB.

2. The title bar for an editor session window didn't display
after having been maximized then restored via the Restore Down
button.
