Toolbars in APL64

Toolbars available in APL+Win are generally available in APL64, but because the Editor, Debugger and State indicator panes can be docked or floated, toolbars are incorporated into the applicable panes. The toolbar buttons in a pane are active only when the content of the pane has keyboard focus.

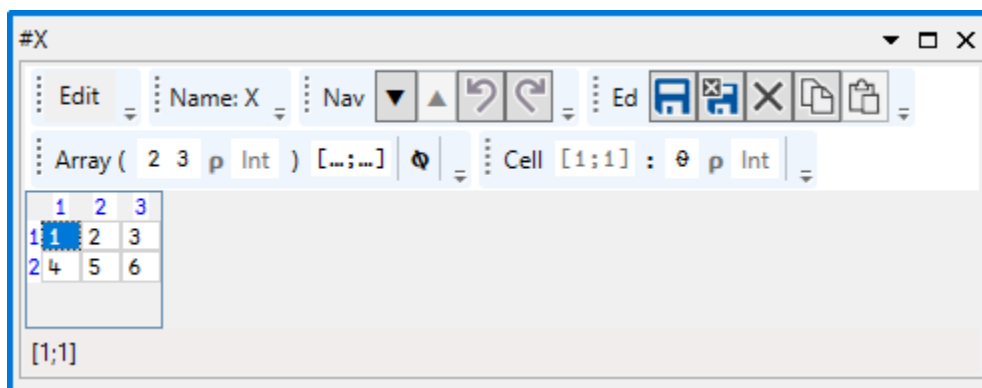

APL Command Line:

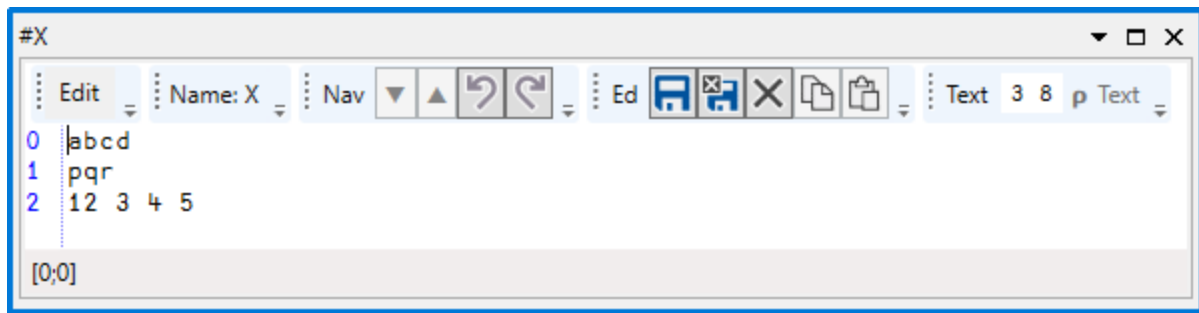

Function Editor Pane:

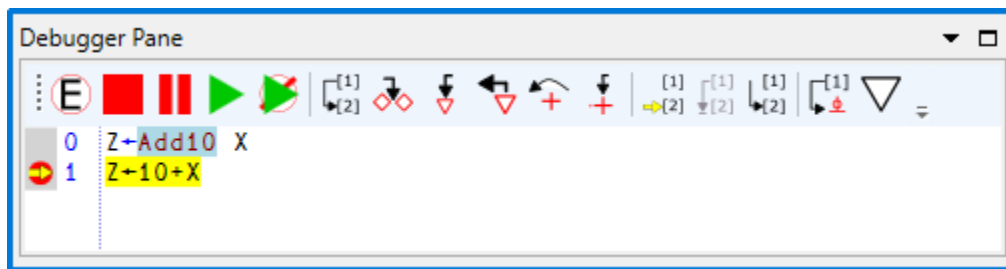

Variable Editor Pane:

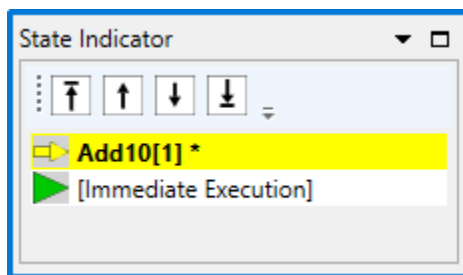

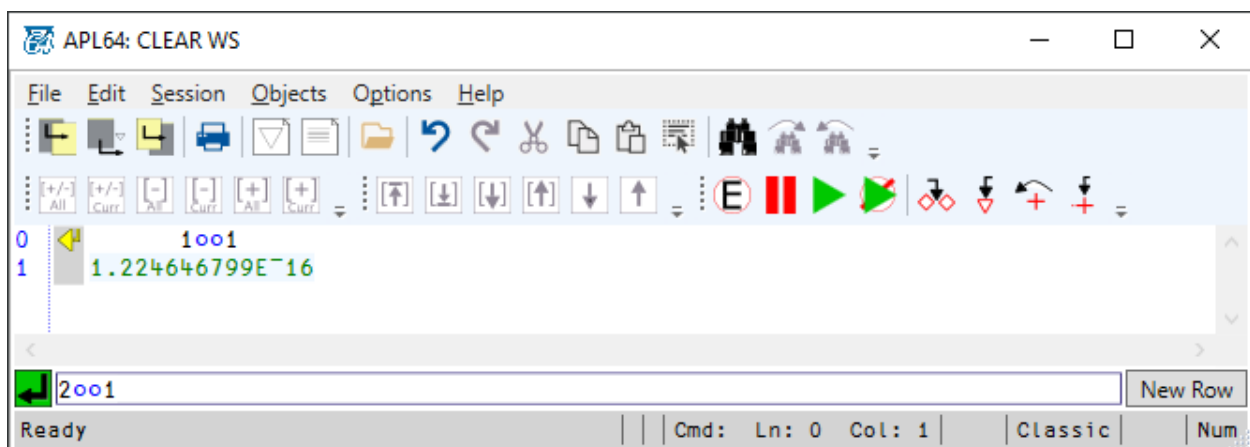

Debugger Pane:

State Indicator Pane:

History and APL Command Line:

Session | Active Panes List

To move the focus to a selected pane [Left] click the name of the pane in the Active Panes List or navigate to the Active Panes List, select the name of a pane and click Enter. The Ctrl+Tab and Ctrl+Shift+Tab keystrokes may also be used to focus on a selected active pane.
